

KREIDEZEIT:

In the Slovenian Karst, from Ljubljana to Trieste

START:

Monday, 21 March 2022, 10 a.m. in Ljubljana
(individual arrival by train or plane possible).

TEAM:

Philip Ursprung, Adam Jasper, Tim Klauser,
Nina Zschocke, Berit Seidel, Sabine Sarwa,
in collaboration with Finn Canonica

END:

Saturday, 26 March 2022 12 a.m. in Trieste
(individual return by train)

SPECIAL GUEST:

Prof. Maruša Zorek, Ljubljana

The seminar week will bring us to the Slovenian karst. Formed during the Kreidezeit (Cretaceous), the topography shaped by corroded limestone with its gorges, caves and subterranean lakes gave the name to geological formations which can be found world-wide. We will start in Ljubljana and walk towards Trieste.

Can the shared experience of this environment, halfway between a geological construction site and a ruin, marked by a complex history, inspire us to find ways out of the turmoil caused by the pandemic?

We will carry with us a black board, chalk and a sponge. Between walks we will gather around the blackboard, listen to guests, discuss, write down notes, leave traces, and erase them again.
